Abstract not available for CN1453219

Abstract of correspondent: **EP1357088**

This plant is characterised in that the water filtering device (5,6) with its motor pump (2), the device for chemically treating said water, the pipes (4) with the corresponding valves (17) and with the openings for receiving the water from the swimming pool (20) and for returning the cleaned and treated water to said swimming pool (19), and the corresponding accessories are all of them connected and installed on a base framework (21) allowing to transport the whole ready-to-operate plant to the site having been chosen for it. All of the components making up this plant can be distributed in independent modules being apt to be fitted to each other. The assembly being made up of all of the components and accessories of the plant, both if they are installed on a single base framework (21) as well as if they are distributed in modules, is of such dimensions as to be apt to be put in a conventional container facilitating its transportation.
